Cleantech in action

Provetek Oy is a Finnish company specialized in providing services for process, environmental and municipal engineering technology. Our approach is to offer our customers comprehensive solutions to manage their projects from design to actual construction work and maintenance.

The core of our expertise is in water supply, sewage and water treatment technologies, process and flue gas treatment, heat and power technology and various kind of assembling and construction works related to these fields.

Our products and services are targeted especially to the cleantech sector.

We are specialized in comprehensive project deliveries, where we can utilize our knowledge in design, production, project management as well as assembling of equipment and maintenance.

We have a qualified design and project management team of chemical engineers, mechanical engineers, civil engineers and environmental engineers.

Expertise for the environment

For each project we compile a team of professionals which is responsible for the execution of the project from the beginning to the end.

In-house design and production resources ensure well-scheduled, flexible and tailored deliveries according to customers' requirements.

WATER

Potable water plants:

Chemical treatment equipment, aeration towers, pumping stations, water tanks

Surface water systems:

Pumping stations and tanks for flood water, fire protection, watering, and raw water

Wastewater treatment:

Wastewater treatment plants, receiving tanks, sludge receiving stations, pumping stations for wastewater

ENERGY

Heat and power technology:

District heating plants, installation of district heating piping and networks, flue gas cleaning and heat recovery systems,

CHP-units

Proven technology

We have strong emphasis on R&D and product design. The basis for our development work is our broad engineering and practical experience on the field of our core competence areas, as well customer feedback. All equipment and components that are used in our products are well-known technical brands that have been selected due to long experience and economical aspects based on whole life cycle of the products.

"Made in Finland"

Our products are designed and manufactured at our own facilities in Kitee, Finland. We have 5700 m² office and production facilities for plastics manufacturing (reinforced plastics and thermoplastics), civil and construction works as well as metal works. All our employees have long experience in their professional areas. Installation, construction and maintenance services we provide together with our co-operation network. Over the years we have developed a reliable mode of operation and quality control systems with our partners. The network enables us to operate nationwide as well as globally.

CONSTRUCTION

Earth and water construction:

Wastewater and potable water lines and equipment installations, excavation and foundation works for technical construction

Technical construction services:

Technical equipment shelters, construction of industrial plants and buildings

PROCESS

Process and odor gases:

Gas scrubbers, active coal filters, ozonization equipment of different sizes

Process and metallurgical industry:

Technical equipment and installations

PROVETEK OY

Pumping stations

Potable water plants

Technical shelters and
construction work

Our clients range from municipalities and other public sector organisations to private companies and households. We are part of Pro-Group-network which offers technical services and project deliveries for cleantech sector. The long-term experience and knowledge in process, environmental and municipal technologies allows us to deliver comprehensive and cost-effective solutions worldwide for our customers. Some examples of our deliveries for global markets are equipment for biogas plants, equipment for mining and metallurgical technology, and large pumping stations to industrial plants.
